PIPEDREAM SPELLCHECK

PipeDream SpellCheck is the spelling checker program for use with PipeDream. With SpellCheck linked to PipeDream, you have an extra pull-down menu which enables you to use SpellCheck directly from within PipeDream itself.

SpellCheck can be used in two different ways; it can bleep whenever you type a word which isn't in its dictionary or it can check a completed document and list all the possible errors at once.

If you want to check the spelling of a word, you can browse through SpellCheck's dictionary to find the word you want. SpellCheck has a dictionary of over 90,000 words and you can also create user dictionaries into which you can put extra words you want SpellCheck to check and accept.

SpellCheck has a 'wildcard' facility which enables you to search the dictionary for a particular set of words, for example all five-letter words beginning with 's' and ending with 'th' - useful for crossword and Scrabble addicts!

Despite its size, SpellCheck is one of the fastest checkers, reaching over 40,000 words per minute on the Acorn Archimedes.

To use SpellCheck, you need to have PipeDream version 2.2. Existing PipeDream users with earlier versions can obtain a free upgrade by sending in their PipeDream disk. Those not ordering anything else at the same time must enclose an S.A.E. large enough for the new disk.

SpellCheck is available for the IBM PC and compatibles and for the Acorn Archimedes. SpellCheck costs £43.00 plus VAT and comes with a comprehensive user guide.

You can order SpellCheck, or any other Colton Software product, by calling us on (0954) 211472 and quoting your Access or VISA number, or by sending us the completed order form (overleaf).

PIPEDREAM ORDER FORM
